Gro-Maxx

Gro-Maxx is a humic acid and silicon dioxide blend used in agricultural and commercial dry fertilizers.

Gro-Maxx is a rich carbon and silicon source for plants boosting nutrient uptake and building stronger chlorophyll pathways.

Gro-Maxx means faster emergence, stronger plant tissue, more biological activity in the root zone, better utilization of nutrients in the plant and increased profitable yields. Also, additional soil carbon to build organic matter for greater air, water and nutrient holding capacities.
